Screenshot of a module I built in Hubspot:

The screenshot displays the HubSpot Design Manager interface for a custom module named 'Onward-Testimonial-Dissolve'. The interface is divided into several sections:

- Top Navigation:** Includes tabs for Design Manager, Go Daddy Website Builder, and a browser address bar showing the URL `https://app.hubspot.com/beta-design-manager/4991160/modules/6735286382`.
- Left Sidebar:** A search bar and a list of assets. The 'Onward-Testimonial-Dissolve' module is selected and highlighted.
- Central Editor:** Displays the module's code in three sections: HTML + HUBL, CSS, and JS. The HTML code uses HubSpot's templating language to render a testimonial with fields for content, speaker, and company. The CSS code defines the layout and styling, including a media query for a minimum width of 455px. The JS code includes a function to rotate pictures based on the testimonial type.
- Right Sidebar:** A user profile dropdown for Grayson Randall, followed by a list of settings including Onward Content, Account & Billing, Integrations, Learning Center, Pricing & Features, Sign out, and Privacy policy. Below this is a list of content types: contentone, Person (one) (Text), speakerone, Company (one) (Text), companyone, Logo (one) (Image), and imageone.
- Bottom Bar:** Shows a status message 'No errors found', the current module 'Custom module', and the specific module 'Onward-Testimonial-Dissolve'. It also includes a line and column indicator (Line 25, Column 43) and links for Reference and Help.
